

A must have: SeaBat 7125SV upgrade

RESON are pleased to announce the sale of two RESON SeaBat 7125ROV2 systems to Ashtead Technology in Aberdeen, UK. The 2011 year model SeaBat 7125ROV2 system is the latest evolution of the SeaBat 7125 series, and is specifically aimed at the Oil, Gas and Renewables Market. The unprecedented data quality; system reliability; and new feature sets distinguish the SeaBat, ensuring it remains the multibeam of choice for ROV operations.

Mr Ian Harvey, Regional General Manager for Ashtead Technology in Aberdeen comments "We have had a long and trusted relationship with RESON, and are delighted that we can meet the increasing market demands from our rental clients. We believe that the new SeaBat 7125ROV2 and its feature set will allow Ashtead Technology to further pioneer leading edge products in the market place".

Mr John Fraser, RESON commented "We are delighted that Ashtead Technology have again chosen RESON for their rental requirements, adding to the four 7125 units that they purchased in 2010. We look forward to supporting them locally from our RESON regional offices, and ensuring that both Ashtead and their rental clients maximise the operational capability of the new SeaBat 7125ROV2"

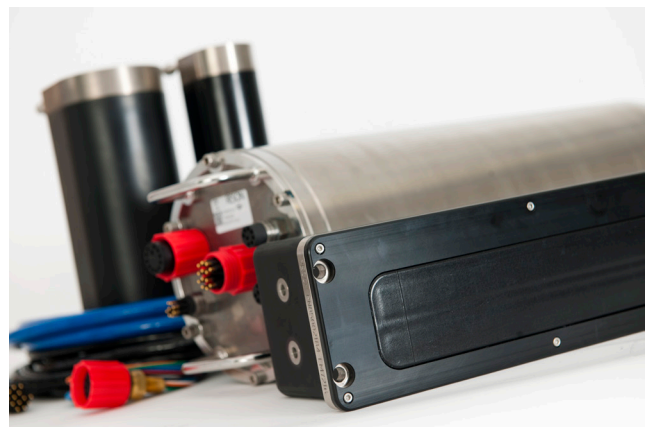

About Ashtead Technology

Ashtead Technology is a leading global supplier of advanced equipment for the Offshore Oil & Gas, Environmental monitoring and Industrial inspection industries. Offering over 16,000 items available for rental, worth in excess of £55m, from 17 locations across Europe, America and Asia. Continuous investment in the latest equipment from leading manufacturers such as RESON enables Ashtead Technology to supply customers with the equipment they require, fully calibrated and ready to use when and where they need it.
